

## Remote Control

## Adapt to More Scenes

## Stable Performance

## Sustainable Power Supply

## Application Scenarios

Electricity protection and sustainable power consumption

Electrified railway station power supply, transportation power distribution system, and highway electromechanical system

Intelligent mining, factory power consumption, base stations, and data centers

Hospitals and ships

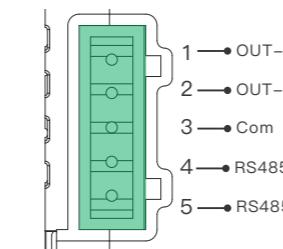

## Device Adaptation

Circuit Breaker	Poles	MCB		RCD		RCBO				
		1P/2P	3P/4P	2P	4P	1P	2P	3P	3P+N	4P
MT51SD -1		✓		✓		✓	✓			
MT51SD -2			✓		✓		✓	✓	✓	✓

Note:

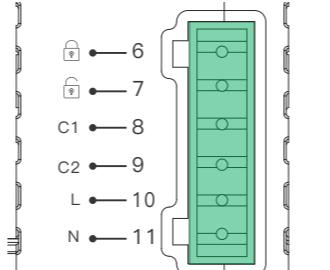

■ represents the matching circuit breaker, respectively W [ Jovean & Rogy ], K [ Nuoke ], H [ Huakai ], N [ Schneider ], Z [ Chint ], L [ Nader ], J [ Vekon ];

## Terminal Diagram

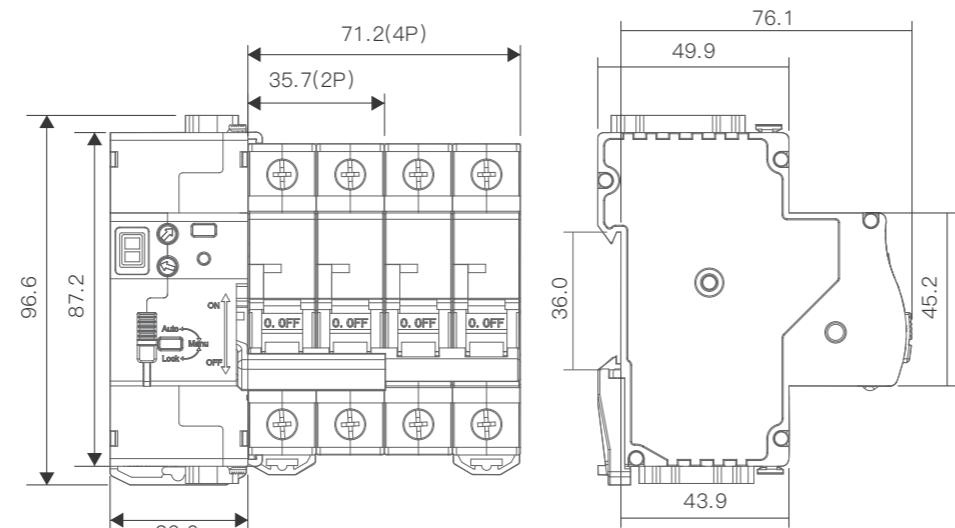

Terminal	Description
OUT-1	OUT-1status output line terminal
OUT-2	OUT-2status output line terminal
Com	Common terminal
RS485-A	RS485-Aterminal
RS485-B	RS485-Bterminal

Terminal	Description
6	Lock the recloser terminal
7	Unlock the recloser terminal
C1	C1control input terminal
C2	C2control input terminal
L	Live line L
N	Neutral line N

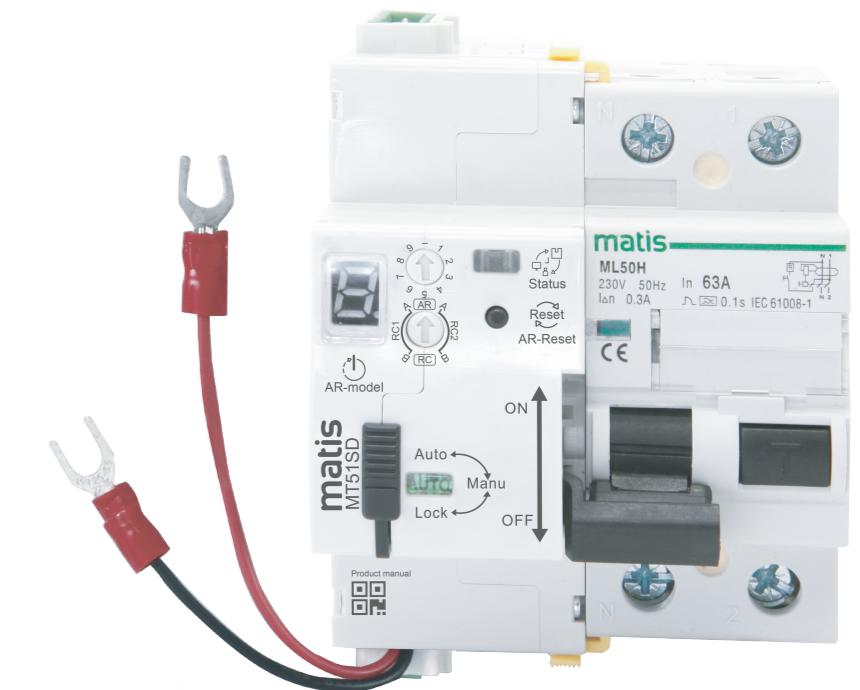

## Dimensional Drawing

## Technical Parameter

General Technical Characteristics	
Rated Voltage ( Ue )	AC 230V
Frequency	50/60Hz
Applicable Circuit Breaker	MATIS RCCB/MCB
Closing Time	≤0.5s(excluding reset time)
Opening Time	≤0.5s(excluding reset time)
Dielectric Property	•Impulse withstand voltage: Uimp=4kV •Power-frequency withstand voltage: 2kV
Rated Insulation Voltage	Ui=500V
Mechanical Life	10000以上
Protection Grade	•IP20 ( independent installation) •IP40 ( cabinet-mounted )
Pollution Degree	2
Operating Temperature	-25°C~+70°C
RH(Relative Air Humidity)	≤95% ( average temperature +25°C )
Working & Operating Voltage	80%~115%Uc
Standby Power Consumption	<1.5VA
Maximum Power Consumption	During the reset period<20VA (<80VA peak value)
Auto Mode	Auto-reclosing, Remote Control, Insulation Monitoring
Auto / Manu / Lock Button Description	Manu Mode Insulation monitoring program Lock Mode Mechanical and electrical control disabled MR0 Auto-reclosing disabled ER1~ER9 RCCB/RCBO Mode
Auto-reclosing Mode	RESET Unlock lock program (>3s) Auto-reclosing failure (>5s)
Control Mode	C1 Local C1/C2 control priority; RS485 auxiliary C2 RS485 control priority; Local control as forced override
Insulation Detection	Detection performed only before auto-reclosing Resistance ≤ 8kΩ Auto-reclosing prohibited Resistance ≥ 16kΩ Auto-reclosing allowed Insulation fault status cleared within 15 minutes Insulation fault status persists ≥15 minutes Detection performed every 5 seconds
Control Circuit	
Input C1, C2 Control Voltage	230Vac
Duration of the Input C2 Command Pulse	200ms
Maximum Response Time	500ms
Control Line Length for Input C1 and C2 at 230Vac	Cable: 100m Wire in cable sheath: 500m
Status Feedback	
OUT Port Contact Capacity	1A 24VAC 300mA 230VAC

**MT51SD Auto-Reclosing with Insulation Detection**

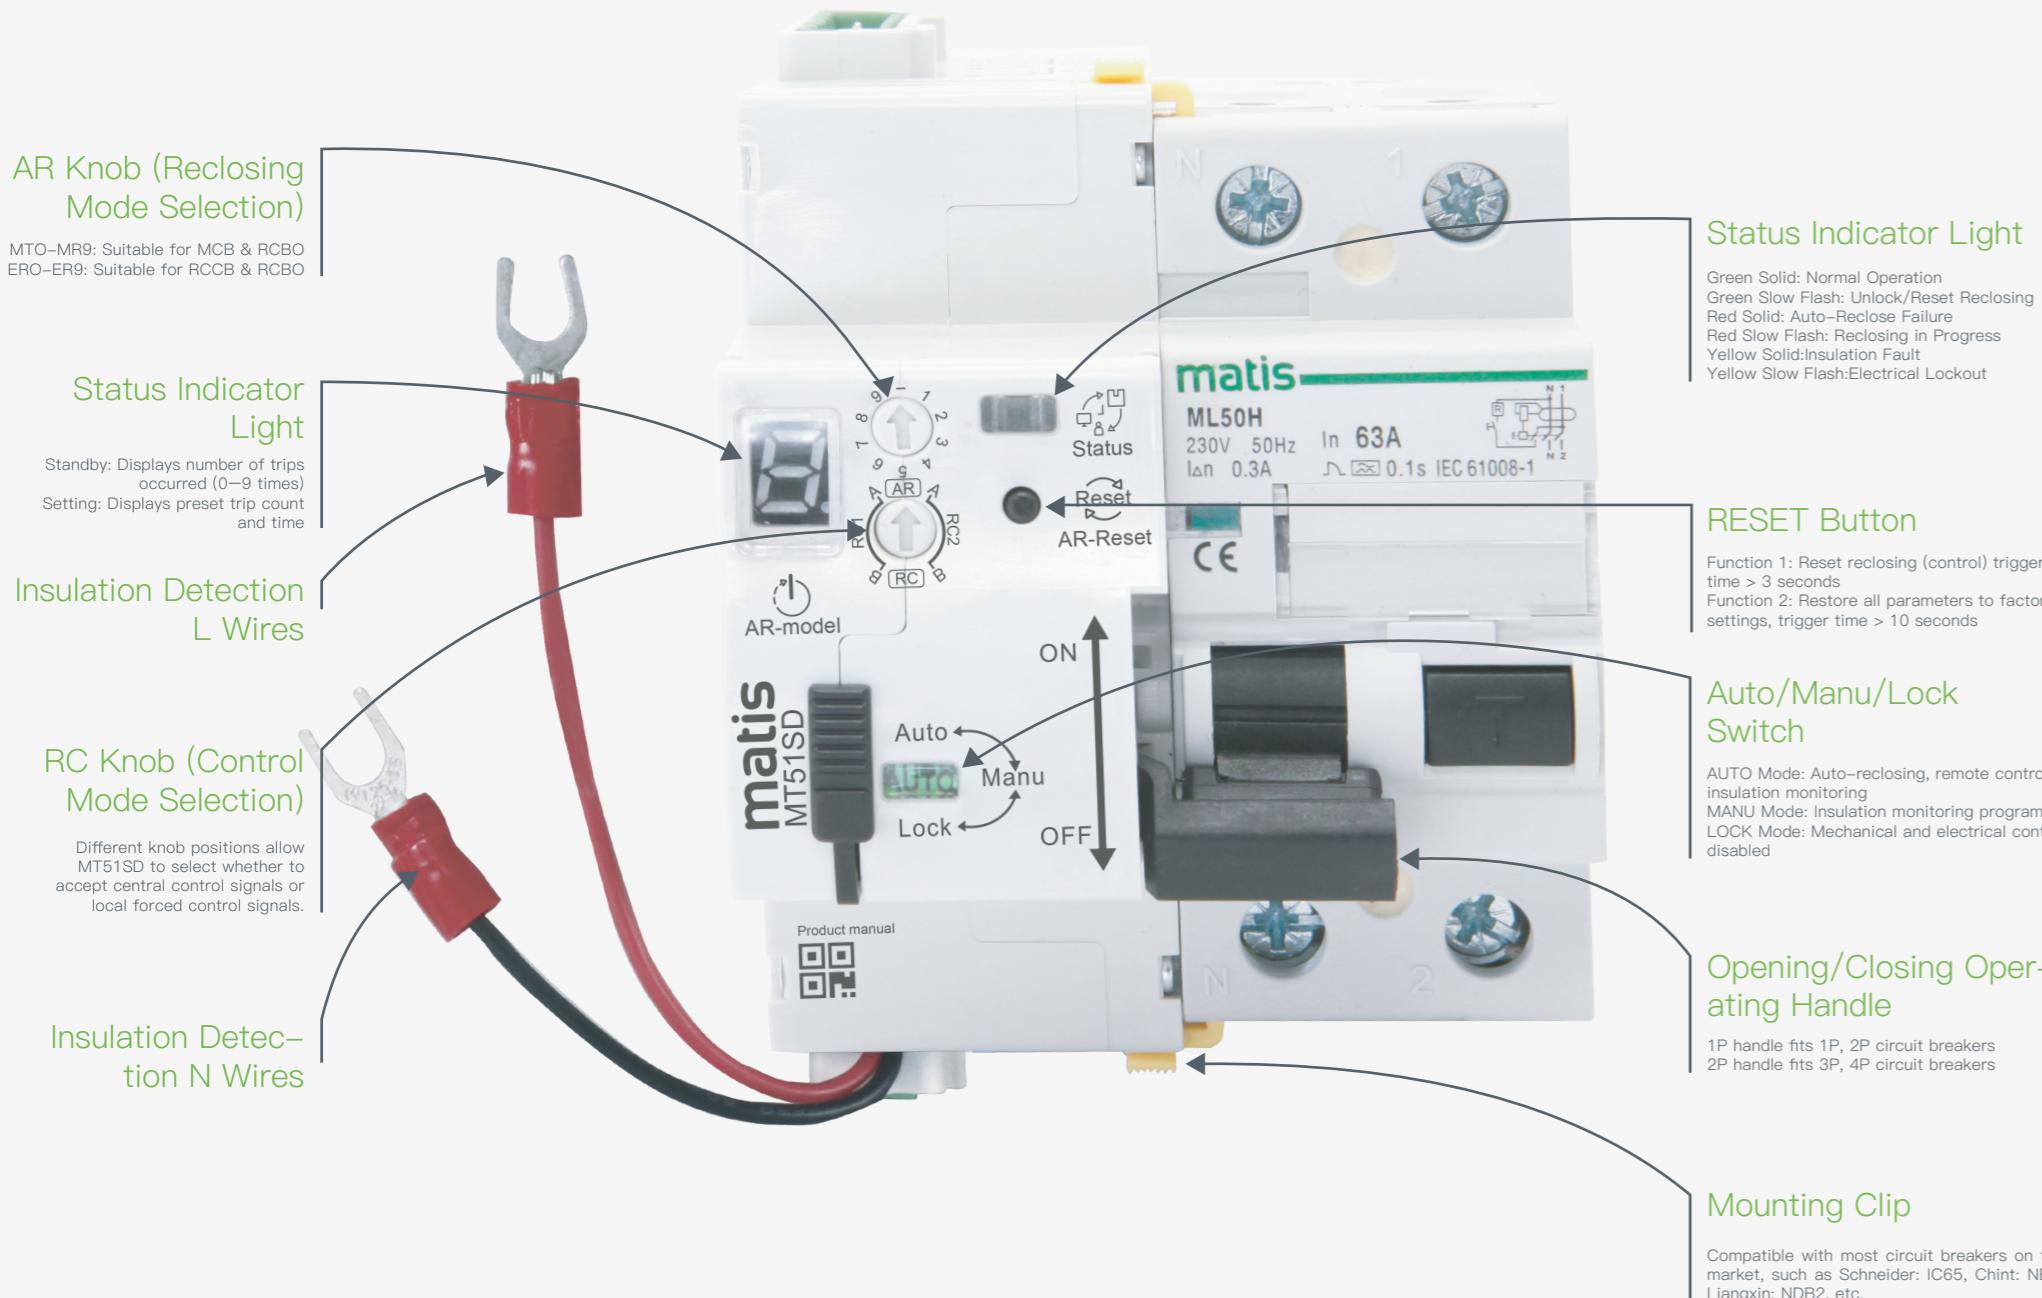

AI Electric Solution to Energy and Carbon

# Remote Control Device with Insulation Detection — MT51SD

MT51SD is an intelligent auto-reclosing accessory for end-of-line distribution circuits, integrating the following functions:

1. Auto-Reclosing
2. Insulation detection before closing
3. Local C1/C2 control input
4. RS485 (Modbus RTU) remote control
5. Electrical interlock and mechanical lockout
6. Switching status and fault output

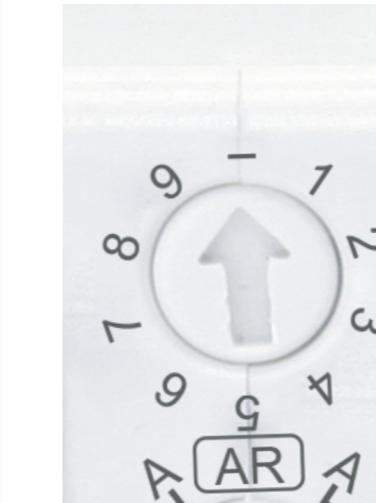

Suitable for applications requiring stable power and smart management, including telecom, transport, and data rooms.

Compatible with the following protective devices: MCB (Miniature Circuit Breaker), RCCB (Residual Current Circuit Breaker), and RCBO (Residual Current Breaker with Overcurrent Protection).

# MT51SD Auto-Reclosing with Insulation Monitoring Ensures Continuous Power Supply

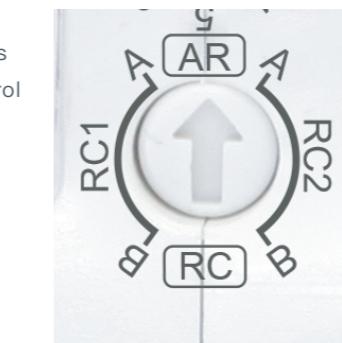

## Auto-Reclosing Mode

Knob 1 is used to select the auto-reclosing operating mode. There are two types, matching [MCB/PCBO] & [FCCB/RCBO] respectively. After the auto-reclosing program is locked, one reclosing operation can be performed remotely via control terminals or RS485. If the reclosing attempt fails, remote or manual reset is required to restore the auto-reclosing settings.

MR0: Disable Auto-reclosing  
-MR1 — MR9: MCB/RCBO Mode  
ER1 — ER9: FCCB/RCBO Mode  
-MR9/ER9: User-defined Mode

## Control Mode

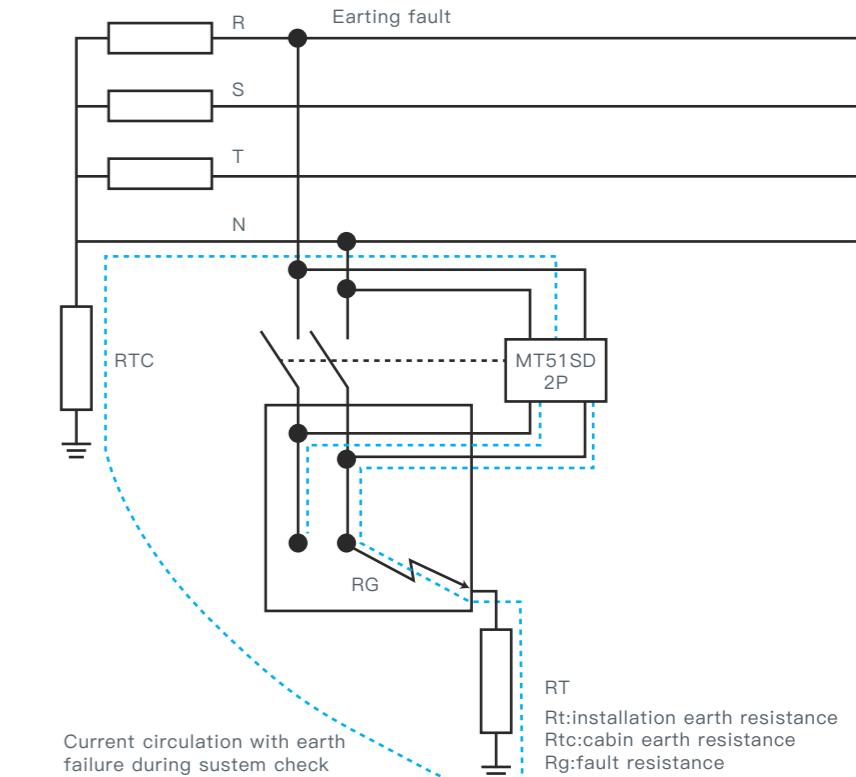

Knob 2 selects whether the MT51SD accepts signals from a central control source or local override control signals, depending on its position.

-RC1: Local C1/C2 control has priority; RS485 is auxiliary  
-RC2: RS485 control has priority; local control acts as a forced override

	Terminal C1	Terminal C2
RC1	A	Local continuous signal control
	B	Remote control is prohibited after tripping
RC2	A	Local force start
	B	Remote control is prohibited after tripping

## Insulation Monitoring

Detection is only performed before automatic reclosing

When resistance ( $Rg \leq 8k\Omega$ ), automatic reclosing is forbidden  
- The device's indicator light is solid yellow, and the system outputs an IM Fault alarm;

When resistance ( $Rg \geq 16k\Omega$ ), automatic reclosing is allowed  
- The device's indicator light slow-flashes red, and it enters automatic reclosing;

Insulation fault state is cleared within 15 minutes  
- Automatically exits the fault state, restores the reclosing logic, and continues to execute the remaining closing process

Insulation fault state persists for  $\geq 15$  minutes  
- Enters "Permanent Fault Protection State", prohibiting all remote and local control operations

Press RESET for 3 seconds after clearing the fault
